

PUMA 5

SPEECH RECOGNITION FOR LAW ENFORCEMENT

PUMA-5 WITH SPEECH RECOGNITION

With the PUMA-5 and Speech Recognition Solution, you'll fast track report generation, minimize paperwork and optimize officers productivity!

Speech recognition increases productivity by providing your Officers with a faster, easier way to complete Incident Reports. By helping your officers get through the stacks of paperwork more quickly, you'll not only reduce time spent on incident reporting, but you can get them back to the critical business of protecting your community. Speech recognition enables officers the ability to dictate narratives, emails and even run license plates without ever touching a keyboard or taking their eyes off their surroundings. The use of the PUMA-5 Digital Audio Recorder now provides a mobile dictation and contact solution which is fully integrated into the speech recognition solution. This promises to save time and money throughout Investigations, Patrol and/or Traffic Divisions.

Fast, Accurate Dictation

The PUMA-5 and Speech Recognition Software is the ideal solution for busy public safety officers who want to work faster and more efficient. Officers can dictate narratives, full incident reports or even emails. All at speeds three times faster than most can type and with 99% accuracy.

Front-End or Back-End Recognition

Workflow is key to the success of Speech Recognition. This is why Versatile Information Products offers a multitude of options for Front-End Speech Recognition, Back-End Speech Recognition or a hybrid of the two.

Boost Efficiency, Increase Accuracy and Save Time

- Streamline Incident Reporting
- Improve Report Quality and Accuracy
- Decrease Time Spent on Paperwork and Increase Time Spent in the Field
- Increase Productivity
- Eliminate Spelling Errors
- Increase Officer Safety
